

Pollinator Kit

Are you interested in supporting pollinators like butterflies, bees, moths, and all the others in between? Then this kit is great choice for your garden. All these plants work great for supporting pollinators of all kinds.

Wild Columbine

Wild columbine is always a wonderful choice for a garden. This plant blooms gentle red flowers that looks as if they were dipped with a touch of yellow, adding a delicate touch to your garden. Being an early bloomer, these flowers are an important source of nectar in early spring for pollinators like the ruby-throated hummingbirds.

Common Milkweed

Common milkweed is a great choice for supporting pollinators. The soft pink blooms are easily recognizable, and attract hundreds of pollinators to enjoy the nectar. However, it's best known for supporting monarch caterpillars that depend on the leaves in order to grow into a butterfly. Plant this in your garden, and enjoy all the insects that come to visit.

Virginia Mountain Mint

As a pollinator magnet, Virginia mountain mint is always a great addition to any garden. The small, white flowers bloom in dense clusters. Although the flowers are small this plant is very fragrant, giving off a nice minty smell that can be admired by anyone walking by. The insects surely notice the smell, because it's usually covered in bees and other pollinators. Looking to help bees? Plant Virginia mountain mint. Bonus: leaves can be used in cooking or to make cocktails!

Willow Aster

Asters are always a great choice to support pollinators. Blooming in early-middle of fall, willow aster is a critical fall blooming plant for pollinators. Many insects will admire light purple flower when added to your garden. When you stop to take a look, you'll notice many species of bees collecting pollen and other pollinators enjoying the nectar provided by the flower.

Rain Garden Kit

This kit is for the rain garden experts, beginners, or for those with a pesky wet spot in their yard. These plants thrive in wet places around your home.

Dense blazing star

Being a low maintenance plant, dense blazing star will make any garden look good without all the work. After planting, it'll grow tall stalks blooming showy flowers that add a feathery look to your garden. Consider planting dense blazing star on the edge to add a unique look to your garden.

Canada anemone

If you're looking for a reliable ground cover, Canada anemone is a great option. It's a beautiful addition to any garden with its unique leaves and white flowers, which bloom for a long period of time from May-June.

Fringed loosestrife

Growing in large clusters, fringed loosestrife will add soft yellow flowers for long blooming periods. These flowers are admired by pollinators, especially bee specialist, because the flower will reward visitors with flower oil which aids in raising their larvae.

Cardinal Flower

Anyone looking to attract ruby-throated hummingbirds to their garden should plant one of their favorite plants, the cardinal flower. Growing from a terminal spike, the flowers bloom an intense red drawing most people in to admire it.

Partial Shade Kit

If you have a garden in partial shade or you're looking to start a garden in one, these plants are a great choice for adding some color in places some plants won't grow.

Lanceleaf coreopsis

These cute yellow flowers add colonies of color to any garden and are a sign that summer is on the way. These attractive flowers are great for wildlife too! Not only do they attract bees and butterflies, the birds also enjoy eating the seeds in late summer.

New England Aster

Blooming in September, New England aster's showy flowers are usually the season finale of most gardens before the winter. This late bloomer is a critical plant for all gardens because it provides nectar to monarch butterflies and bees before winter comes.

Culver's Root

Culver's root is a unique plant that blooms in many spikes that has many benefits. The flowers attract pollinators like honeybees and butterflies. But it also attracts predatory insects, which prey on insects that are garden pests. Planting this wildflower is a great way to help support all kinds of insects.

Blue-eyed grass

Despite its name, blue-eyed grass is actually an iris. This sweet small blue flower grows in tufts like a grass, making it great boarder to a garden. Blooming in late May-early June, it'll add early color to your garden.

Clay Loving Kit

Many residents in Medina County have clay around their home. If you're one of those people looking for plants that thrive in clay, this kit is for you. Each of these plants will add a unique look to your garden while happily growing in the clay.

Foxglove Beardtongue

Foxglove beardtongue is a wonderful addition to your garden. Growing in clumps allow for an attractive bloom in late spring. Not only are these flowers great to look at, they're also a magnet for bees, making this plant a great option for bee lovers.

Rattlesnake Master

This plant is a wonderful option for any garden as an accent plant or on the edge. Being low maintenance while growing in a variety of conditions makes it great for any gardener regardless if you have a green thumb or not. Rattlesnake master is left alone by deer while attracting a variety of pollinators, resulting in insect diversity in your garden.

Wild Bergamot

Wild bergamot is a favorite because of its ability to adapt to most garden conditions while grabbing the attention of a variety of pollinators. The showy pink flowers and fragrant leaves would be a great addition to any garden.

Wild Senna

This plant is under-appreciated native. Wild Senna has showy, creamy, yellow flowers that bloom around July-August. Not only does Wild Senna steal the show when it's in bloom, the compound leaves will add a stunning textured look to your garden throughout the growing season.
